MATLAB/Simulink Essentials is an interactive approach based guide for students to learn how to employ essential and hands-on tools and functions of the MATLAB and Simulink packages to solve engineering and scientific computing problems, which are explained and demonstrated explicitly via examples, exercises and case studies. The main principle of the book is based on learning by doing and mastering by practicing. It contains hundreds of solved problems with simulation models via M-files/scripts and Simulink models related to engineering and scientific computing issues. There are many hints and pitfalls indicating efficient usage of MATLAB/Simulink tools and functions, efficient programming methods and pinpointing most common errors occurred in programming and using MATLAB's built-in tools and functions and Simulink modeling. Every chapter ends with relevant drill exercises for self-testing purposes.

This much needed book is the first to provide a comprehensive history of the profession and aesthetics of American automobile design. The author reveals how the appearance of the automobile was shaped by the social conflicts arising from America's mass production system. He connects the social struggles of American society with the organizational struggles of designers to create symbol-laden substitutes for the American dream. Theoretically sophisticated, lucid and compelling, Auto-Opium will appeal to all interested in the American obsession with the car.
