Our colleagues from the French-speaking parts of Switzerland - the Suisses romands - and above all the committee of the 3rd Cycle, e Earth Sciences (3 Cycle, Sciences de la Terre) honored us by asking us to give a course on Isotope Geology for the year 1977. The course, entitled Evaluation et Interpretation des Donnees Isotopiques (evaluation and Interpretation of Isotopic Data), was intended to inform earth scientists, graduate and postgraduate, from the western Swiss Universities on the subject of Isotope Geology. Such courses usually consist of two parts: lectures and excursions. Thus, in March 1977, we gave such a two-week course at the Mineralogical Institute of the University of Berne. The first week was devoted essentially to the methods of dating, the second week to the behavior of stable isotopes. In July 1977, on the occasion of an excursion to the Central and Western Alps, we were able to demonstrate our results. Guest professors were invited to make contributions to the course.

The Canon Camera Hackers Manual addresses "geeky" owners of Canon consumer cameras, such as the Powershot and IXUS, who would like to explore the possibilities of their cameras and tweak them to do things that go well beyond the camera's original specifications. --

When danger to the sheep leaves no alternative, a young Navajo boy breaks his promise to his father and is rewarded for his courage and good judgment.

The second edition of this classic textbook presents a rigorous and self-contained introduction to real analysis with the goal of providing a solid foundation for future coursework and research in applied mathematics. Written in a clear and concise style, it covers all of the necessary subjects as well as those often absent from standard introductory texts. Each chapter features a "Problems and Complements" section that includes additional material that briefly expands on certain topics within the chapter and numerous exercises for practicing the key concepts. The first eight chapters explore all of the basic topics for training in real analysis, beginning with a review of countable sets before moving on to detailed discussions of measure theory, Lebesgue integration, Banach spaces, functional analysis, and weakly differentiable functions. More topical applications are discussed in the remaining chapters, such as maximal functions, functions of bounded mean oscillation, rearrangements, potential theory, and the theory of Sobolev functions. This second edition has been completely revised and updated and contains a variety of new content and expanded coverage of key topics, such as new exercises on the calculus of distributions, a proof of the Riesz convolution, Steiner symmetrization, and embedding theorems for functions in Sobolev spaces. Ideal for either classroom use or self-study, Real Analysis is an excellent textbook both for students discovering real analysis for the first time and for mathematicians and

researchers looking for a useful resource for reference or review. Praise for the First Edition: “[This book] will be extremely useful as a text. There is certainly enough material for a year-long graduate course, but judicious selection would make it possible to use this most appealing book in a one-semester course for well-prepared students.” —Mathematical Reviews

A coverage of the Transputer Development System (TDS), an integrated programming environment which facilitates the programming of transputer networks in OCCAM. The book explains transputer architecture and the OCCAM programming model and incorporates a TDS user guide and reference manual.

This book is a comprehensive primer to both traditional and emerging E-Commerce technologies. Students with no prior technical knowledge will be able to grasp complex topics such as networking, Internet security, Web languages and other important subjects in a way that illustrates their use through case studies and practice by completing Web projects.

This book is a contemporary history of environmental issues in Delhi. It traces the journey from the engagement with sanitary matters in the nineteenth century to issues of air and water pollution, waste and toxicity in contemporary Delhi. Matters of environmental improvement, it suggests, are synchronous in Indian cities rather than being separated in time and space, making them distinct from cities of the global North. The book engages with the shifts on multiple registers by analysing the social, biophysical and health-related spaces in the city. It references the world of the social to explore the attitudes to safety and security, relations of race and class, habitations of humans and those of animals, the place of the rural within the urban and the continuum on which legal and illegal practices locate themselves. Contextualizing the spatial, it maps the specific sites at which environmental issues are most prominently posed, such as rivers and slaughterhouses, streets and factories, slums, and public spaces. Investigating the dynamics of biophysical resources: air and water, their contamination and possible states of purity through social surveys and scientific standards, Sharan sifts through the emotional registers of pain and prejudice, and mines the vocabulary of planning, governance, and the measures of risk. Finally, the book situates itself in contested domains, for efforts at environmental improvement in the city of Delhi, as elsewhere, have been aimed not only at securing cleaner biophysical resources and better health, but have also always been about possibilities of creating alternate ways of dwelling in the city. Traversing the colonial and postcolonial in the city, the book highlights the multiplicity of urban forms evident in the distinction between the old city and the new capital and between the inhabitants and the ruling race. In the postcolonial city, planned and informal spaces, legal and illegal practices, legible, and uncertain conditions have been the more prominent distinctions for articulating alternative modes of urban dwelling.
