Disaster recovery is a subset of business continuity planning. Disaster recovery plans involve restoring vital support systems. Those systems are mostly communications, hardware, and IT assets. Disaster recovery aims to minimize business downtime and focuses on getting technical operations back to normal in the shortest time possible.

Business Continuity vs Disaster Recovery: 5 Key Differences

Often used together, the terms Business Continuity and Disaster Recovery are very different. Business Continuity refers to the ability of a business to continue critical functions and business processes after the occurrence of a disaster, whereas Disaster Recovery refers specifically to the Information Technology (IT) and data-centric functions of the business, and is a subset of Business Continuity.

Disaster recovery and business continuity auditing - Wikipedia

Business continuity (BC) and disaster recovery (DR) are closely related practices that support an organization's ability to remain operational after an adverse event. Resiliency has become the watchword for organizations facing an array of threats, from natural disasters to the latest round of cyberattacks.

What Is BCDR? Business Continuity and Disaster Recovery Guide

Disaster recovery and business continuity are tightly related. In the 1970s, organizations started preparing Disaster Recovery (DR) plans, which were mainly focused on natural disasters. In the 1980s and onwards, the focus shifted to a more holistic view, named Business Continuity (BC).

Disaster Recovery and Business Continuity Plans in Action

And while cloud computing services can be used to address both business continuity and disaster recovery, you must have a fundamental understanding of the differences to do effective planning. Disaster recovery (DR) refers to having the ability to restore the data and applications that run your business should your data center, servers, or other infrastructure get damaged or destroyed.

The difference between disaster recovery and business ...

Disaster recovery is a subject of business continuity and focuses on technology or information systems including data recovery. As such, disaster recovery planning involves ensuring data is stored and backed up such that employees can access any plans, servers, mail, files and presentations when working from an off-site location.

Difference Between Business Continuity and Disaster Recovery

Although the terms 'business continuity' and 'disaster recovery' are often used interchangeably, they are two distinct – if overlapping – disciplines. Disaster recovery plans are often relatively technical and focus on the recovery of specific operations, functions, sites, services or applications, and form part of a wider BCMS.
