The new car's engine was based on the one fitted in the Fiat 124 Sport: a 1608 cc DOHC unit with 90 bhp driving the rear wheels. The 125 was equipped with a Solex carburettor. The car was fitted with an alternator, reflecting the twin headlights and the increasing number of energy intensive electrical components appearing on cars at this time.

~~Fiat 125 - Wikipedia~~

The 125's new engine was a development of the 124 Sport's - it was a 1608cc dohc that developed a very healthy 90bhp. It was another of those Fiats built across the globe - with assembly in Yugoslavia, Egypt, Argentina, Colombia, Chile, and - of course - Poland in the form of the licence-built FSO 125P. That car was renowned for its horrendously bad dynamics and build quality, something that could not be said about the Fiat original.

Fiat 125 Special was produced from 1970 to 1972. The new car got a changed radiator grille, enlarged headlights and high-quality materials of interior finishing. Designers set rubber inserts in the bumper and transferred direction indicators from the headlight assembly into it.

Increasing pressure on global reserves of petroleum at a time of growing demand for personal transport in developing countries, together with concerns over atmospheric pollution and carbon dioxide emissions, are leading to a requirement for more sustainable forms of road transport. Major improvements in the efficiency of all types of road vehicles are called for, along with the use of fuels derived from alternative sources, or entirely new fuels. Towards Sustainable Road Transport first describes the evolution of vehicle designs and propulsion technologies over the past two centuries, before looking forward to possible new forms of energy to substitute for petroleum. The book also discusses the political and socio-economic drivers for change, investigates barriers to their broad implementation, and outlines the state-of-the-art of candidate power sources, advanced vehicle design, and associated infrastructure. The comprehensive technical information supplied by an expert author team ensures that Towards Sustainable Road Transport will provide readers with a clear understanding of the ongoing progress in this field and the challenges still to be faced. Drivers of technological change in road transport and the infrastructure requirements Discussion of alternative fuels for internal combustion engines and fuel conversion technologies Detailed exploration of current and emerging options for vehicle propulsion, with emphasis on hybrid/ battery electric traction, hydrogen, and fuel cells Comparative analysis of vehicle design requirements, primary power source efficiency, and energy storage systems

Previously unpublished analysis of why and how the Italians fought A look at the role the Italian Army played in North Africa as part of the Deutsches Afrika Korps (German Afrika Korps) In spite of poor leadership, the Italian soldier performed well against all odds in North Africa Profusely illustrated with many rare and unpublished images 'The German soldier has impressed the world, however, the Italian Bersagliere soldier has impressed the German soldier.' Erin Rommel aka 'The Desert Fox' When most people think of the Italian Army in North Africa during the Second World War, they tend to believe that the average Italian soldier offered little resistance to the Allies before surrendering. Many suggest that the Italian Army performed in a cowardly manner during the war: the reality is not so simple. The question remains as to whether the Italians were cowards or victims of circumstance. While the Italian soldier's commitment to the war was not as great as that of his German counterpart, many Italians fought bravely. The Italian Littorio and Ariete Divisions earned Allied admiration at Tobruk, Gazala and El Alamein. The Italian Army played a significant role as part of the German Afrika Korps and made up a large portion of the Axis combat power in North Africa during 1941 and 1942. In the interest of determining how the Italian Army earned the reputation that it did, it is necessary to analyse why and how the Italians fought.

A visual guide to the history of tanks, Tank tells the full history of tanks through stunning photography and informative text. From the early Mark Is of World War I to the T-34 of World War II to the cutting-edge M1 Abrams of today, Tank showcases the most famous (or infamous) armored fighting vehicles in history. Packed full of tanks, armored vehicles, personnel carriers, and anti-tank weaponry, Tank combines comprehensive photographic spreads with in-depth histories of key manufacturers and specially commissioned visual tours of the most iconic examples of their kind. The featured vehicles are placed in their wider context, along with with tactical and technological improvements, and the impact of the tank on the evolution of battlefield and military strategy. Tank charts the evolution of the tank over the past century, covering over 450 tanks and military vehicles from all over the world. Look through the history of tanks and explore the form and function of a weapon that changed history. Learn the different vehicles' weight, size, country of origin, and time of use through in-depth profiles. An essential visual history, Tank provides a complete and exciting overview to the iconic vehicles that changed history.

Yukari Akiyama and the girls of the Ooarai Girls' Academy are up against the prestigious St. Gloriana Women's Academy in their first practice match. The game will test Miho Nishizumi's leadership skills as team captain and the Ooarai team itself. Can Miho's new style of Tankery take her friends to the next level in the Tankery National Tournament?

By the end of the twentieth century there were some half-million tractors on British farms - more machines than people to drive them. Brian Bell's encyclopaedic book traces the evolution of the farm tractor from the days of starting handle and pan seat to current 4-wheel drive machines with air-conditioned cabs and computer management systems. He deals in particular with developments of the classic period from the 1950s to the 1990s. The book is arranged alphabetically by manufacturer from Allis-Chalmers to Zetor, one hundred marques in total. These are all machines to be found on British farms irrespective of their country of manufacture. Brian runs concisely through the histories of the companies and their major models, illustrated with a wealth of photographs and extracts from sales literature. He adds some special features on items such as hydraulic systems and cold-starting aids. He includes a glossary and full index. This book replaces the author's earlier, successful, Fifty Years of Farm Tractors. Many of the photographs are new and the text has been brought up to date to include developments of the early twenty-first century.
