Fundamentals of Information Theory. Y. Chapter 8. Fundamentals of Information Theory. 8.1 Introduction. There are two types of formalisms for this theory. One is due to Shannon, where the information stored in an event is measured using the uncertainty associated with the probability of that event. Another is due to Kolmogorov/Chaitin, where the amount of information stored in an object is proportional to number of bits needed to describe (compress) that object.

John L Errington MSc April 2011. Fundamentals of Information Theory. A signal is a way of conveying information from one point to another. Our concern is to examine how much information is conveyed by a particular signal. Signals are simple in form if they do not carry much information. A mathematically correct sinusoidal varying voltage is described by the equation  $v = A \sin \omega t$  By definition this extends from  $t=-\infty$  to  $t=+\infty$  without any change in amplitude,  $A$ , or
