Next. This guideline covers preventing and treating surgical site infections in adults, young people and children who are having a surgical procedure involving a cut through the skin. It focuses on methods used before, during

Online Library Surgical Site

and after surgery to minimise the risk of infection. In August 2020, we added links to the NICE guideline on perioperative care in adults for additional recommendations on intravenous fluids, cardiac monitoring and blood glucose control in adults.

Surgical site infections - Evidence search | NICE

Infections that occur in the wound created by an invasive surgical procedure are generally referred to as surgical site infections (SSIs). SSIs are one of the most important causes of healthcare-

Online Library Surgical Site

associated infections (HCAIs). A prevalence survey undertaken in 2006 suggested that approximately 8% of patients in hospital in the UK have an HCAI. SSIs accounted for 14% of these infections and nearly 5% of patients who had undergone a surgical procedure
